Click here to apply!

About ISSIQP

ISSIQP will present the fundamental principles of integrated photonic devices, including hands-on activities involving design, fabrication, and characterisation.

ISSIQP will then showcase how such integrated photonic devices and components can be used to implement applications in quantum technologies

In addition to specialist training, ISSIQP will provide attendees with a unique opportunity for international networking and future collaboration

Target Audience

ISSIQP targets PhD students with a base knowledge in quantum information and an interest in learning more about the different implementations of quantum photonics

Open to PhD Students based in USA, Canada and UK

Application deadline April 10 2023*

Funds available to support attendance
